BizzFrame

Business brief

BizzFrame gives a business a clear picture of its structure: departments, positions and the people who fill them.

1. What it does

BizzFrame is the business framework and HR administration application. It manages organisational structure, employee records, positions and departments, so a company always knows how it is organised and who does what.

2. Main features

- Organizational structure management
- Employee records
- Position tracking
- Department management
- Human resources administration for businesses and organizations

3. How it works with other applications

BizzFrame uses the shared Crux record for every employee and company, so a person's HR record and their identity across the platform are the same. Every item it manages also uses the CloudWinks base functions: media through MediaMogul, role players, dates and times, ratings, budgets, transactions and a status flow. Each base function opens the controls in the app that owns them, so nothing is duplicated.
