CLOUDWINKS · HOME, FAMILY & EVERYDAY LIFE

ComfyCottage

Technical brief

ComfyCottage keeps a family’s home running: the property, its upkeep, what is in it and what it costs.

1. Architecture in brief

ComfyCottage is a CloudWinks app in the Home, family and everyday life group. Each record belongs to the person who owns it, and other people cannot see it. It builds on Crux. Its screens, fields and menus are definitions, built by the same pipeline as every other CloudWinks app.

2. Service boundary and intake

ComfyCottage owns its own records. People and companies come from Crux rather than a separate user list, files are stored in MediaMogul and linked, and work that belongs to another app opens in that app.

3. Data handled

Properties and buildings, maintenance schedules, home inventory, calendar entries and expenses.

4. Integrations and ownership

ComfyCottage records belong to the person who owns them, and use the shared Crux record for each family member.

5. Security and access

Sign-in, roles and permissions come from KeyKook, and people and companies come from Crux. Each record belongs to the person who owns it, and other people cannot see it. Any record shown through another app, a portal or a combined view still passes that app’s permission check, and money, security and company-account work always runs on the server.
