Equipico

Business brief

Equipico tells a business what equipment it owns, how hard it is working, when it needs service and what it is worth.

1. What it does

Equipico is the equipment and asset management application. It tracks each asset, schedules its maintenance, monitors how much it is used and follows its depreciation, covering the whole life of the asset across its whole life.

2. Main features

- Asset tracking
- Maintenance scheduling
- Utilization monitoring
- Depreciation tracking
- Asset lifecycle management for businesses and organizations

3. How it works with other applications

Equipico is where a business records its assets, so other applications can point to an asset rather than keep their own copy of it. Every item it manages also uses the CloudWinks base functions: media through MediaMogul, role players, dates and times, ratings, budgets, transactions and a status flow. Each base function opens the controls in the app that owns them, so nothing is duplicated.
