CLOUDWINKS · OPERATIONS & WORKFORCE

Equipico

Technical brief

Equipico tells a business what equipment it owns, how hard it is working, when it needs service and what it is worth.

1. Architecture in brief

Equipico is a CloudWinks app in the Operations and workforce group. Each record belongs to a company, and other companies cannot see it. It builds on Crux. Its screens, fields and menus are definitions, built by the same pipeline as every other CloudWinks app.

2. Service boundary and intake

Equipico owns its own records. People and companies come from Crux rather than a separate user list, files are stored in MediaMogul and linked, and work that belongs to another app opens in that app.

3. Data handled

Assets, maintenance schedules, utilization records and depreciation history.

4. Integrations and ownership

Equipico is where a business records its assets, so other applications can point to an asset rather than keep their own copy of it.

5. Security and access

Sign-in, roles and permissions come from KeyKook, and people and companies come from Crux. Each record belongs to a company, and other companies cannot see it. Any record shown through another app, a portal or a combined view still passes that app’s permission check, and money, security and company-account work always runs on the server.
