CloudWinks

CLOUDWINKS · HOME, FAMILY & EVERYDAY LIFE

Familia

Business brief

Familia organises a family and preserves its history: family trees, members, genealogy research and heritage.

1. What it does

Familia is the family organisation and genealogy application. It manages family trees, tracks members, supports genealogy research, preserves heritage and links each family member's digital presence, bringing family history together in one place.

2. Main features

- Family tree management
- Member tracking
- Genealogy research
- Heritage preservation
- Digital presence integration
- Family history management

3. How it works with other applications

Familia uses the shared Crux record for each person, so family members are the same people who use every other CloudWinks app. Every item it manages also uses the CloudWinks base functions: media through MediaMogul, role players, dates and times, ratings, budgets, transactions and a status flow. Each base function opens the controls in the app that owns them, so nothing is duplicated.
