CLOUDWINKS · AGRICULTURE & EQUINE

# FarmDance

## Technical brief

FarmDance is the working record of a farm: crops, livestock, fields and the daily tasks that tie them together, supported by weather and soil data.

### 1. Architecture in brief

FarmDance is a CloudWinks app in the Agriculture and equine group. A record can belong to a person or to a company, and other people and companies cannot see it. It builds on Crux. Its screens, fields and menus are definitions, built by the same pipeline as every other CloudWinks app.

### 2. Service boundary and intake

FarmDance owns its own records. People and companies come from Crux rather than a separate user list, files are stored in MediaMogul and linked, and work that belongs to another app opens in that app.

### 3. Data handled

Farms, fields, crops, livestock, scheduled tasks, weather data and soil data.

## 4. Integrations and ownership

FarmDance sits with StockMan, HorseStudbook, FoalFactory, HuntingLodge and StableKidz in the agriculture group, and uses the shared Crux record for every farm, owner and worker.

## 5. Security and access

Sign-in, roles and permissions come from KeyKook, and people and companies come from Crux. A record can belong to a person or to a company, and other people and companies cannot see it. Any record shown through another app, a portal or a combined view still passes that app’s permission check, and money, security and company-account work always runs on the server.
