FathersFlock

Business brief

FathersFlock gives churches and religious organisations one place for their members, events, giving and volunteers.

1. What it does

FathersFlock is the congregation management application for churches and religious organisations. It tracks members, manages events, records donations, coordinates volunteers and provides the administrative tools a congregation needs.

2. Main features

- Member tracking
- Event management
- Donation tracking
- Volunteer coordination
- Administrative tools for churches and religious organizations

3. How it works with other applications

FathersFlock uses the shared Crux record for members and organisations, so a member has one identity across every CloudWinks app. Every item it manages also uses the CloudWinks base functions: media through MediaMogul, role players, dates and times, ratings, budgets, transactions and a status flow. Each base function opens the controls in the app that owns them, so nothing is duplicated.
