FireSticks

Technical brief

FireSticks runs shooting sports end to end, from a personal firearms inventory to a full club and range. ShootingClubs is part of FireSticks.

1. Architecture in brief

FireSticks is a CloudWinks app in the Hobbies and sports group. A record can belong to a person or to a company, and other people and companies cannot see it. It builds on Crux. Its screens, fields and menus are definitions, built by the same pipeline as every other CloudWinks app.

2. Service boundary and intake

FireSticks owns its own records. People and companies come from Crux rather than a separate user list, files are stored in MediaMogul and linked, and work that belongs to another app opens in that app.

3. Data handled

Firearms and ammunition inventory, compliance records, ranges and schedules, members, events and competitions, and equipment.

4. Integrations and ownership

FireSticks sits in the Hobbies and sports group, alongside MuscleMadness. It uses the shared Crux record for members, clubs and ranges.

5. Security and access

Sign-in, roles and permissions come from KeyKook, and people and companies come from Crux. A record can belong to a person or to a company, and other people and companies cannot see it. Any record shown through another app, a portal or a combined view still passes that app’s permission check, and money, security and company-account work always runs on the server.
