CloudWinks

CLOUDWINKS · HOME, FAMILY & EVERYDAY LIFE

GoGrownup

Technical brief

GoGrownup helps adults manage the practical side of life: goals, money, health and career, all in one organised place.

1. Architecture in brief

GoGrownup is a CloudWinks app in the Home, family and everyday life group. Each record belongs to the person who owns it, and other people cannot see it. It builds on Crux. Its screens, fields and menus are definitions, built by the same pipeline as every other CloudWinks app.

2. Service boundary and intake

GoGrownup owns its own records. People and companies come from Crux rather than a separate user list, files are stored in MediaMogul and linked, and work that belongs to another app opens in that app.

3. Data handled

Goals, plans, financial planning entries, health entries and career records.

4. Integrations and ownership

GoGrownup records belong to the person who owns them and use the shared Crux record for identity.

5. Security and access

Sign-in, roles and permissions come from KeyKook, and people and companies come from Crux. Each record belongs to the person who owns it, and other people cannot see it. Any record shown through another app, a portal or a combined view still passes that app’s permission check, and money, security and company-account work always runs on the server.
