HorseStudbook

Technical brief

HorseStudbook keeps the official record of every horse: pedigree, registration, breeding history and performance.

1. Architecture in brief

HorseStudbook is a CloudWinks app in the Agriculture and equine group. A record can belong to a person or to a company, and other people and companies cannot see it. It builds on Crux. Its screens, fields and menus are definitions, built by the same pipeline as every other CloudWinks app.

2. Service boundary and intake

HorseStudbook owns its own records. People and companies come from Crux rather than a separate user list, files are stored in MediaMogul and linked, and work that belongs to another app opens in that app.

3. Data handled

Horses, pedigrees, registrations, breeding history and performance records.

4. Integrations and ownership

HorseStudbook is the pedigree record that FoalFactory and HorseShowBizz rely on, and it uses the shared Crux record for owners, breeders and organisations.

5. Security and access

Sign-in, roles and permissions come from KeyKook, and people and companies come from Crux. A record can belong to a person or to a company, and other people and companies cannot see it. Any record shown through another app, a portal or a combined view still passes that app’s permission check, and money, security and company-account work always runs on the server.
