CLOUDWINKS · AGRICULTURE & EQUINE

HuntingLodge

Technical brief

HuntingLodge runs a hunting lodge or outfitter end to end: guests and bookings, hunts and game, the lodge and its equipment.

1. Architecture in brief

HuntingLodge is a CloudWinks app in the Agriculture and equine group. Each record belongs to a company, and other companies cannot see it. It builds on Crux. Its screens, fields and menus are definitions, built by the same pipeline as every other CloudWinks app.

2. Service boundary and intake

HuntingLodge owns its own records. People and companies come from Crux rather than a separate user list, files are stored in MediaMogul and linked, and work that belongs to another app opens in that app.

3. Data handled

Guests, bookings, hunts, game records, lodge operations and equipment.

4. Integrations and ownership

HuntingLodge sits in the agriculture group with the land and livestock applications, and uses the shared Crux record for guests, guides and companies.

5. Security and access

Sign-in, roles and permissions come from KeyKook, and people and companies come from Crux. Each record belongs to a company, and other companies cannot see it. Any record shown through another app, a portal or a combined view still passes that app’s permission check, and money, security and company-account work always runs on the server.
