CLOUDWINKS · HOME, FAMILY & EVERYDAY LIFE

MiSalud

Business brief

MiSalud is the central health record for CloudWinks. A person's health record and medicines are kept once, and other apps see only what that person agrees to share.

1. What it does

MiSalud holds each person's health record in one place, together with a personal medicine tracker for doses, refills, prior authorisations and cold-chain medicines. Other CloudWinks apps, such as StableKidz and Pharmakologie, draw on MiSalud for health information instead of keeping their own copies, and see only what the person agrees to share.

2. Main features

- Personal health record kept once per person
- Personal medicine tracker: doses, refills, prior authorisations and cold-chain items
- Sharing by consent, with each app seeing only what is allowed

3. How it works with other applications

Every MiSalud record belongs to a Crux person. StableKidz and Pharmakologie draw on MiSalud for health details instead of keeping their own copies. Every item it manages also uses the CloudWinks base functions: media through MediaMogul, role players, dates and times, ratings, budgets, transactions and a status flow. Each base function opens the controls in the app that owns them, so nothing is duplicated.
