CLOUDWINKS · HOME, FAMILY & EVERYDAY LIFE

MiSalud

Technical brief

MiSalud is the central health record for CloudWinks. A person’s health record and medicines are kept once, and other apps see only what that person agrees to share.

1. Architecture in brief

MiSalud is a CloudWinks app in the Home, family and everyday life group. Each record belongs to the person who owns it, and other people cannot see it. It builds on Crux, KeyKook and MediaMogul. Its screens, fields and menus are definitions, built by the same pipeline as every other CloudWinks app.

2. Service boundary and intake

MiSalud owns its own records. People and companies come from Crux rather than a separate user list, files are stored in MediaMogul and linked, and work that belongs to another app opens in that app.

3. Data handled

Each person’s health record, medication courses, doses, refills, prior authorisations, cold-chain items and consents.

4. Integrations and ownership

Every MiSalud record belongs to a Crux person. StableKidz and Pharmakologie draw on MiSalud for health details instead of keeping their own copies.

5. Security and access

Sign-in, roles and permissions come from KeyKook, and people and companies come from Crux. Each record belongs to the person who owns it, and other people cannot see it. Any record shown through another app, a portal or a combined view still passes that app’s permission check, and money, security and company-account work always runs on the server.
