MuscleMadness

Technical brief

MuscleMadness runs a gym or fitness centre: members, classes, trainers, equipment and billing.

1. Architecture in brief

MuscleMadness is a CloudWinks app in the Hobbies and sports group. A record can belong to a person or to a company, and other people and companies cannot see it. It builds on Crux. Its screens, fields and menus are definitions, built by the same pipeline as every other CloudWinks app.

2. Service boundary and intake

MuscleMadness owns its own records. People and companies come from Crux rather than a separate user list, files are stored in MediaMogul and linked, and work that belongs to another app opens in that app.

3. Data handled

Members, class schedules, trainers, equipment and memberships.

4. Integrations and ownership

MuscleMadness sits in the Hobbies and sports group, alongside FireSticks, and uses the shared Crux record for members and trainers.

5. Security and access

Sign-in, roles and permissions come from KeyKook, and people and companies come from Crux. A record can belong to a person or to a company, and other people and companies cannot see it. Any record shown through another app, a portal or a combined view still passes that app’s permission check, and money, security and company-account work always runs on the server.
