Pharmakologie

Business brief

Pharmakologie runs pharmacy operations: inventory, prescriptions, dispensing and regulatory compliance. Personal medicine tracking lives in MiSalud.

1. What it does

Pharmakologie is the pharmacy operations application for pharmacies and healthcare facilities. It covers inventory, prescription tracking, medication dispensing, interaction checks, a controlled-substance log, suppliers, claims and regulatory compliance, together with pharmacist credentials. A person’s own medicines, doses and refills are kept in MiSalud, the central health record.

2. Main features

- Inventory management
- Prescription tracking
- Medication dispensing
- Interaction checks
- Controlled-substance log
- Suppliers and claims
- Regulatory compliance
- Pharmacist credentials

3. How it works with other applications

Pharmakologie keeps pharmacy operations. Patient health details and the personal medicine tracker live in MiSalud, which shares only what the person consents to. Every item it manages also uses the CloudWinks base functions: media through MediaMogul, role players, dates and times, ratings, budgets, transactions and a status flow. Each base function opens the controls in the app that owns them, so nothing is duplicated.
