Pharmakologie

Technical brief

Pharmakologie runs pharmacy operations: inventory, prescriptions, dispensing and regulatory compliance. Personal medicine tracking lives in MiSalud.

1. Architecture in brief

Pharmakologie is a CloudWinks app in the Specialist services and communities group. Each record belongs to a company, and other companies cannot see it. It builds on Crux. Its screens, fields and menus are definitions, built by the same pipeline as every other CloudWinks app.

2. Service boundary and intake

Pharmakologie owns its own records. People and companies come from Crux rather than a separate user list, files are stored in MediaMogul and linked, and work that belongs to another app opens in that app.

3. Data handled

Medication stock, prescriptions, dispensing records, the controlled-substance log, suppliers, claims and pharmacist credentials.

4. Integrations and ownership

Pharmakologie keeps pharmacy operations. Patient health details and the personal medicine tracker live in MiSalud, which shares only what the person consents to.

5. Security and access

Sign-in, roles and permissions come from KeyKook, and people and companies come from Crux. Each record belongs to a company, and other companies cannot see it. Any record shown through another app, a portal or a combined view still passes that app’s permission check, and money, security and company-account work always runs on the server.
