# ProcureFlow

## Technical brief

ProcureFlow turns purchasing into a clear, controlled workflow, from the first requisition through approval to the purchase order and the vendor who fills it.

### 1. Architecture in brief

ProcureFlow is a CloudWinks app in the Operations and workforce group. Each record belongs to a company, and other companies cannot see it. It builds on Crux. Its screens, fields and menus are definitions, built by the same pipeline as every other CloudWinks app.

### 2. Service boundary and intake

ProcureFlow owns its own records. People and companies come from Crux rather than a separate user list, files are stored in MediaMogul and linked, and work that belongs to another app opens in that app.

### 3. Data handled

Vendors, requisitions, approvals and purchase orders.

## 4. Integrations and ownership

ProcureFlow uses the shared Crux record for vendors and staff, so a supplier is one company record across the platform.

## 5. Security and access

Sign-in, roles and permissions come from KeyKook, and people and companies come from Crux. Each record belongs to a company, and other companies cannot see it. Any record shown through another app, a portal or a combined view still passes that app’s permission check, and money, security and company-account work always runs on the server.
