SellWell

Technical brief

SellWell is a point-of-sale system that keeps the counter, the stockroom and the customer list in step.

1. Architecture in brief

SellWell is a CloudWinks app in the Business, finance and commerce group. Each record belongs to a company, and other companies cannot see it. It builds on Crux. Its screens, fields and menus are definitions, built by the same pipeline as every other CloudWinks app.

2. Service boundary and intake

SellWell owns its own records. People and companies come from Crux rather than a separate user list, files are stored in MediaMogul and linked, and work that belongs to another app opens in that app.

3. Data handled

Products, inventory levels, sales transactions, payments and customers.

4. Integrations and ownership

SellWell uses the shared Crux record for customers and staff, so a customer is the same record whether they buy in store or appear in another CloudWinks app.

5. Security and access

Sign-in, roles and permissions come from KeyKook, and people and companies come from Crux. Each record belongs to a company, and other companies cannot see it. Any record shown through another app, a portal or a combined view still passes that app’s permission check, and money, security and company-account work always runs on the server.
