SkillScraper

Business brief

SkillScraper shows a business what skills its people have, how strong they are and where to develop them.

1. What it does

SkillScraper is the skills assessment and talent management application. It tracks skills, evaluates competencies, supports talent development and records performance assessments, giving HR and managers the tools to build their workforce.

2. Main features

- Skill tracking
- Competency evaluation
- Talent development
- Performance assessment
- Workforce development tools for HR and talent management

3. How it works with other applications

SkillScraper uses the shared Crux record for each person, and works alongside BizzFrame's structure of departments and positions. Every item it manages also uses the CloudWinks base functions: media through MediaMogul, role players, dates and times, ratings, budgets, transactions and a status flow. Each base function opens the controls in the app that owns them, so nothing is duplicated.
