SkillScraper

Technical brief

SkillScraper shows a business what skills its people have, how strong they are and where to develop them.

1. Architecture in brief

SkillScraper is a CloudWinks app in the Operations and workforce group. A record can belong to a person or to a company, and other people and companies cannot see it. It builds on Crux. Its screens, fields and menus are definitions, built by the same pipeline as every other CloudWinks app.

2. Service boundary and intake

SkillScraper owns its own records. People and companies come from Crux rather than a separate user list, files are stored in MediaMogul and linked, and work that belongs to another app opens in that app.

3. Data handled

Skills, competency evaluations, development plans and performance assessments.

4. Integrations and ownership

SkillScraper uses the shared Crux record for each person, and works alongside BizzFrame’s structure of departments and positions.

5. Security and access

Sign-in, roles and permissions come from KeyKook, and people and companies come from Crux. A record can belong to a person or to a company, and other people and companies cannot see it. Any record shown through another app, a portal or a combined view still passes that app’s permission check, and money, security and company-account work always runs on the server.
