CLOUDWINKS · BUSINESS, FINANCE & COMMERCE

UseAbit

Technical brief

UseAbit makes shared assets and facilities easy to book and easy to account for, so they are used well rather than left idle.

1. Architecture in brief

UseAbit is a CloudWinks app in the Business, finance and commerce group. A record can belong to a person or to a company, and other people and companies cannot see it. It builds on Crux. Its screens, fields and menus are definitions, built by the same pipeline as every other CloudWinks app.

2. Service boundary and intake

UseAbit owns its own records. People and companies come from Crux rather than a separate user list, files are stored in MediaMogul and linked, and work that belongs to another app opens in that app.

3. Data handled

Shared resources, bookings, availability schedules and utilisation records.

4. Integrations and ownership

UseAbit uses the shared Crux record for owners and borrowers, so each booking is tied to the same person or company used everywhere else.

5. Security and access

Sign-in, roles and permissions come from KeyKook, and people and companies come from Crux. A record can belong to a person or to a company, and other people and companies cannot see it. Any record shown through another app, a portal or a combined view still passes that app’s permission check, and money, security and company-account work always runs on the server.
