CloudWinks

CLOUDWINKS · HOME, FAMILY & EVERYDAY LIFE

# YumYum

## Technical brief

YumYum is the food app from farm to table: recipes, meal plans and grocery lists at home, and farm-to-restaurant tracking through TraceWinks, which is part of YumYum.

### 1. Architecture in brief

YumYum is a CloudWinks app in the Home, family and everyday life group. A record can belong to a person or to a company, and other people and companies cannot see it. It builds on Crux. Its screens, fields and menus are definitions, built by the same pipeline as every other CloudWinks app.

### 2. Service boundary and intake

YumYum owns its own records. People and companies come from Crux rather than a separate user list, files are stored in MediaMogul and linked, and work that belongs to another app opens in that app.

### 3. Data handled

Recipes, ingredients, meal plans, grocery lists, nutrition, dietary and allergen tags, recipe costs and farm-to-restaurant tracking records.

## 4. Integrations and ownership

YumYum uses the shared Crux record for each person, family and business.

## 5. Security and access

Sign-in, roles and permissions come from KeyKook, and people and companies come from Crux. A record can belong to a person or to a company, and other people and companies cannot see it. Any record shown through another app, a portal or a combined view still passes that app’s permission check, and money, security and company-account work always runs on the server.
